PROFESSIONAL SUMMARY

Full Stack Software Engineer with a front-end focus and 6+ years of experience building production web applications, most recently with React, TypeScript, Next.js, Node.js and NestJS. Delivers features end to end with automated testing, CI/CD and safe releases. Recognized in internal reviews for autonomy and high-quality pull requests; mentors new teammates and uses Claude Code daily for AI-assisted development.

TECHNICAL SKILLS

- **Frontend:** React, TypeScript, JavaScript (ES6+), Next.js, Material UI, HTML5, CSS3, Tailwind CSS, Sass, Reusable Components, Hooks, Context API, Reducers, State Management, Responsive Web Design, Angular
- **Backend & APIs:** Node.js, NestJS, Express.js, REST APIs, Third-Party API and SDK Integrations
- **Databases & Cloud:** PostgreSQL, MySQL, MongoDB, AWS (S3, Cognito)
- **Testing, CI/CD & Release:** Jest (unit tests for React components), UAT and Functional Testing, Lighthouse, GitHub Actions, LaunchDarkly (feature flags), Code Reviews
- **AI:** Claude Code, Gemini, AI-assisted development and code review
- **Monitoring & Analytics:** Sentry, Mixpanel, Honeycomb, Looker
- **Tools & Methodologies:** Git, GitHub, Jira, Confluence, Postman, Figma, Scrum, Agile

PROFESSIONAL EXPERIENCE

Unico

Identity verification company

Software Engineer (promoted) | Jun 2025 – Oct 2026

- Delivered full stack features from database to UI, such as per-country settings so clients in Mexico and Brazil see only the capabilities available to them, process creation with email notifications, and configurable privacy and help URLs.
- Built a webhooks configuration panel so clients could manage their own webhooks, plus the backend endpoint that returns its configuration; coordinated reviews with the Reliability team and rolled it out gradually with feature flags.
- Created GitHub Actions pipelines that check code quality, security vulnerabilities and file size, and deploy to DEV, UAT and production; tested features in UAT and coordinated the production release of process creation.
- Led a frontend architecture refactor of Unico's most-used client portal to make it easier to maintain and extend: planned it end to end, got tech lead approval, split shared state into 7 focused modules and removed legacy code.
- Cut camera startup in the identity verification flow from ~10s to 4.5–6s on most tested devices (about 40–55% faster) by preloading a third-party SDK; used Mixpanel and Sentry during its gradual rollout to fix errors and support more devices.
- Mentored and onboarded every new engineer on the team, from environment setup to their first pull request and production release; reviewed teammates' code and wrote setup and runbook documentation in Confluence.
- Used Claude Code daily for planning, Jira tasks, code improvements and code review; AI output was checked by two review agents (Claude and Gemini) plus a human reviewer before merge.
- Rated “Supera” (exceeds expectations) in internal performance reviews for three consecutive semesters; recognized by the support team for diagnosing a production issue affecting a major client.

Frontend Engineer | Jul 2024 – May 2025

- Migrated Dashboard 3.0, the client dashboard used by customers in Mexico, from React to Next.js in a two-developer team, doing about 80–90% of the implementation.
- Built about 12 responsive screens, including validations, process history, rules, roles and permissions, and team invitations, with URL-based filters, clear error states and Honeycomb monitoring.
- Built React UIs with Material UI and wrote Jest unit tests for React components; worked with UX on missing fields and with QA to validate the migrated functionality.
- Improved the dashboard's Google Lighthouse scores: Performance 32 to 84 (desktop) and 33 to 88 (mobile), Best Practices 75 to 96.

Antpack

Software Developer | Mar 2022 – May 2024

- Built web applications (e-commerce platforms, ERP systems, administrative tools) with React, TypeScript, Next.js, Node.js and NestJS.
- Integrated AWS services (Amazon S3, Amazon Cognito), HubSpot, Google Authentication and payment gateways.
- Led an internal AI project to automatically answer social media messages, with a dashboard to configure brand tone, audience satisfaction and automated replies; nearly complete when its launch was postponed.
- Supported other teams on an Angular project; worked in Scrum teams and used Postman for API testing.

Universidad Antonio Nariño (UAN)

Junior Developer | Feb 2020 – Apr 2022

- Fixed bugs, built features and adapted university web applications for mobile using JavaScript, jQuery, Bootstrap, JSP and Sybase.
- Performed functional testing, resolved loading-time issues and built internal tools.

Software Development Intern (full-time) | Jul 2019 – Dec 2019

- Prepared technical documentation and UML diagrams and supported JSP and jQuery applications.

EDUCATION

Software Engineering degree – Fundación Universitaria Compensar, 2018 – 2024

CERTIFICATIONS

- Scrum Fundamentals Certification – SCRUMstudy, 2021
- JavaScript Professional – Platzi, 2023
- Frontend Developer – Platzi, 2023
- Backend with Node.js: REST API with Express.js – Platzi, 2022
- AWS Cloud Computing Fundamentals – Platzi, 2022
- Academic Certificate in Intermediate English (B2) – SMART Academia de Idiomas

LANGUAGES

Spanish: Native | English: B2 | Portuguese: Elementary (workplace comprehension)
